Application Time:

The disinfection is applied when 3-5 living individuals (nymph, matured) are seen per leaf after the garden controls.

For cherry, the disinfection must be applied on fruitless trees or after the harvest.

For vineyard, the disinfection must be applied when 15-20 active living individuals are seen.

DURABILITY:

Listomed does not indicate a cross durability with known acaricides. Obey the suggested doses to decrease the risk of durability and do not apply more than 1 in one season.

INFORMATION ON RESISTANCE:

The pesticide name **Listomed** is an insecticide classifies as Group 23 in accord with its action mechanism. Repeated applications of pesticides with same action mechanisms invite development of resistance. Therefore, to delay development of resistance, do not exceed the recommended number of **Listomed** applications in the same season. In case repeated application is necessary, take care to use pesticides with a different action mechanism (other than Group 23).

MISCIBILITY:

The mixture is affected by formulation of other pesticides and especially solvent quantity. So, if mixture is required, a mixture test must be made before the application. There is no need to mix emitter and adhesive.
