PLANTS AND PESTS TO BE USED FOR

Plant	PEST	USAGE DOSAGES	WAITING PERIOD
Corn	wireworm (<i>Agriotes spp.</i>)	250ml/100kg before dibbling seed dressing	---

USAGE:

Recommended usage for Accusave with seed dressing machine in seed production units. The machine is calibrated based on the dose and drugs used undiluted directly. On the level of farmers' practices, seed dressing bins or cement mixers must be used. First, the required amount of medication is mixed with 2-3 fold water and poured on the seeds which are into the store of device. The device is run without waiting for at least 3 minutes. the mixture must be provided seeds until smooth pink color. Sprayed seeds are dispersed on a flat surface for drying and wait for 10 minutes.

INFORMATION ABOUT RESISTANCE:

Accusave named plant protection products according to its mechanism of action is classified as Group 2B. Repetitive applications of plant protection products with the same mechanism of action, encourages the development of resistance. For this reason, to delay development of resistance in Accusave on the same production season, the number of applications exceeds the recommended total. In cases where the application should be repeated, with a different mechanism of action (Group 2B external) careful use of plant protection products.

MIXING CASES: There is no any barrier to mixing other insecticides and fungicides in terms of tank mixture except in highly alkaline properties. However, a germination test should be performed first, if the mixture.
